

Position Health

A Division of DM Systems

Since 1979, DM Systems and Heelift® have been the names to trust when it came to quality outcomes in the prevention and treatment of heel pressure ulcers. As our business grows, we are expanding our product offering to include the very best products for the prevention and treatment of all pressure ulcers. And with that, we felt it appropriate to update our look and change our name. What won't change is the high standard of clinical evidence and effective performance from all of our products.

From high end wheelchair cushions to the most basic disposable positioners, Position Health has a head to toe solution for the prevention and treatment of pressure ulcers. We look forward to bringing you all the benefits of the Position Health line.

Position Health is the pressure ulcer prevention and treatment division of DM Systems. It was founded in 1979 by an orthopedic surgeon who wanted better heel pressure ulcer prevention for his surgical patients.

Over the years, we've learned unequivocally that the best way to treat pressure ulcers is to avoid them. In order to accomplish this, we must avoid pressure. Our team of clinicians has developed an entire suite of solutions to do just that. With our flagship line of heel offloading boots, the Heelift, and our new innovative TurnAssist repositioning system, we can avoid pressure.

But prevention is about more than just products. It's also about education. Protocols, policies, and prevention/treatment algorithms are all a part of how we can help lower prevalence.

The next generation of pressure ulcer prevention is here. And no matter what clinical setting you're in, Position Health have the tools and the expertise to deliver it to patients and caregivers.

THE NEXT GENERATION OF PRESSURE INJURY PREVENTION AND TREATMENT

TURNASSIST

TURNASSIST™ PATIENT TURNING SYSTEM

The TurnAssist Patient Turning System allows for quick, safe and easy repositioning of patients. The durable glide sheet is made with advanced materials that allow breathability, meaning the TurnAssist can be used with low air loss mattresses. The ergonomically designed wedges have sturdy handles and a removable cover. The larger upper torso wedge and a smaller lower torso wedge keep the patient properly positioned to offload the sacrum.

- The Standard TurnAssist has a dual-layer glide sheet that features a bottom layer manufactured with micro-holes that allow for greater ventilation. The top layer features a durable, fluid proof and antimicrobial material that provides flexibility and reduces shear.
- TurnAssist Premium adds a unique middle layer that keeps air moving while cushioning the body and redistributing more pressure.
- All TurnAssist glide sheets come with rugged double-stitched handles that allow for easy four way repositioning.
- Optional moisture pads for incontinent patients keep moisture off the patient.

Durable and washable, the TurnAssist and TurnAssist Premium can help prevent pressure ulcers while avoiding nursing injury.

BODY POSITIONERS

GEL POSITIONING PADS

Gel Positioning Pads specialize in pressure redistribution of the head, torso, and lower extremities. The correct position of a patient is able to be maintained with the use of this pad. *Gel Positioning Arm Board Pad is designed for use on standard arm board table extensions to protect the patient's forearm, elbow, and bicep areas from uneven pressure. ^Reusable gel head positioner is made with a dry viscoelastic polymer gel and is designed with an open center ring to reduce pressure on the occipital lobe. Designed to reduce shear and friction, the head positioner supports the head and neck while in the prone position.

BODY PROTECTORS

HEEL/ELBOW PROTECTORS

The Heel and Elbow Protectors decrease the risk of tissue breakdown while reducing the possibility of prolonged hospitalization. These protectors maximize comfort by using strategic cushioning on pressure points and convoluted foam for air circulation and comfort. The soft, lightweight convoluted foam forms around the heel or elbow with a soft hook and loop closure for protection.
